US-10-280-826-41
i Sequence 41, Application US/10280826
i Publication No. US20030077831A1
i GENERAL INFORMATION:
APPLICANT: Tekamp-Olson, Patricia
TITLE OF INVENTION: METHOD FOR EXPRES!
TOPOLOGY: linear;

MOLECULE TYPE: protein;

SEQUENCE DESCRIPTION: SEQ ID NO: 41:
US-09-921-398-41
```

```
OGGANISM: Artificial Sequence
FEATURE: OTHER INFORMATION: Fusion protein with N-terminal portion of DAV-1 heavy chain
OTHER INFORMATION: and IGF-1 mature peptide
US-09-033-327A-12

Nixon A.J., Toland B.D., Sandell L.J.;

Submitted (JAN-1997) to the BMBL/GenBank/DDBJ databases.

-1- FUNCTION: THE INSULIN-LIKE GROWTH PACTORS, ISOLATED FROM PLASMA,

ARE STRUCTURALLY AND FUNCTIONALLY RELATED TO INSULIN BUT HAVE A

MUCH HIGHER GROWTH-PROMOTING ACTIVITY.

-1- SUBCELLULAR LOCATION: SECRETED.

-1- ALTERNATIVE PRODUCTS:

Event-Alternative splicing; Named isoforms=2;
                                                                                                                                                                                                                                                                                                                   Equus caballus (Horse).

"Expression of IGF-Ib cDNA clone isolated from Paralichthys olivaceus
"Expression of IGF-Ib cDNA clone isolated from Paralichthys olivaceus
in mammalian GMO cell line using green fluorescence protein (GPP)
tagging: secretory production of big IGFIb-GFP fusion proteins from
stable transfected GMO cell outlure.";
Submitted (AUG-1998) to the EMBL/GenBank/DDBJ databases.
-- SUBCELLULAR LOCATION: SECRETED (BY SIMILARITY).
-- SIMILARITY: BELONGS TO THE INSULIN/IGF/RELAXIN FAMILY.
HSSP: PO1343; 2GF1.

Gilmour R.S.;

"The porcine insulin-like growth factor-I gene: characterization and

expression of alternate transcription sites.";

J. Mol. Endocrinol. 11:201-211(1993).

-: FUNCTION: The insulin-like growth factors, isolated from plasma,

are structurally and functionally related to insulin but have a

much higher growth-promoting activity.

-: SUBCELLULAR LOCATION: Secreted.

-: SUBCELLULAR LOCATION: Delangs to the insulin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    MEDLINE=89996956; PubMed=1211153; Tavakkol A., Simmen R.C.M.; Tavakkol A., Simmen F.A., Simmen R.C.M.; Toyrchie insulin-like growth factor-I (pIGF-I): complementary deoxyribonucleic acid cloning and uterine expression of messenger ribonucleic acid encoding evolutionarily conserved IGF-I peptides."; Mol.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       blochem. J. 251:95-103(1988).

-!- FUNCTION: The insulin-like growth factors, isolated from are structurally and functionally related to insulin but much higher growth-promoting activity.

-!- SUBCELLULAR LOCATION: Secreted.
-!- SIMILARITY: Belongs to the insulin family.
                                                                                                                                                                                                                      01-APR-1988 (Rel. 07, Created)

Submitted (DEC-1994) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: The insulin-like growth factors, isolated from plasma, are structurally and functionally related to insulin but have a much higher growth-promoting activity.
-!- SUBCELIULAR LOCATION: Secreted.
-!- SIMILARITY: Belongs to the insulin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1 GPETLCGAELVDALQFVCGDRGFYFNKPTGYGSSSRRAPQTGIVDECCFRSCDLRRLEMY

Blosci. Biotechnol. Blochem. 59:759-761(1995).
-!- FUNCTION: The insulin-like growth factors, isolated from plasma, are structurally and functionally related to insulin but have a much higher growth-promoting activity.
-!- SUBCELDUAR LOCATION: Expressed in all tissues examined: brain, lung, liver, spleen, uterus, ovary, testis, heart and skeletal
                                                                                                                                                                        Capra hircus (Goat).

Binchint sheep serum.";
Binchin. Bipphys. Acta 997:27-35 (1989).
-i- FUNCTION: The insulin-like growth factors, isolated from plasma,
are structurally and functionally related to insulin but have a
much higher growth-promoting activity.
-i- SUBCELIULAR LOGATION: Secreted.
-i- ALTERNATIVE PRODUCTS:

"Primary structure of rat insulin-like growth factor-I and its

biological activities.;

J. Biol. Chem. 264:5516-5621(1989).

-: FUNCTION: The insulin-like growth factors, isolated from plasma,

are structurally and functionally related to insulin but have a

much higher growth-promoting activity.

-: SUBCELLULAR LOCATION: Secreted.

"Insulin-like growth factor-I messenger RNA content in the oviduct o Japanese quail (Coturnix octurnix japonica): changes during growth and development or after estrogen administration.";

Comp. Biochem. Physiol. 109C:191-204(1994)

-!- FUNCTION: The insulin-like growth factors, isolated from plasma, are structurally and functionally related to insulin but have a much higher growth-promoting activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       10-OCT-2003 (Rel. 42, Last annotation update)
Insulin-like growth factor I precursor (IGF-I) (Somatomedin)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ch 94.8%; Score 365; DB 1; Length 133; I Similarity 94.3%; Pred.
